

Function: default()

```
default( opts? ): < T >( obj ) => T
```

Really Fast Deep Clone

Types

`rfdc` clones all JSON types:

- `Object`
- `Array`
- `Number`
- `String`
- `null`

With additional support for:

- `Date` (copied)
- `undefined` (copied)
- `Function` (referenced)
- `AsyncFunction` (referenced)
- `GeneratorFunction` (referenced)
- `arguments` (copied to a normal object)

All other types have output values that match the output of `JSON.parse(JSON.stringify(o))`.

For instance:

```
const rdfc = require('rdfc')()
const err = Error()
err.code = 1
JSON.parse(JSON.stringify(e)) // {code: 1}
rdfc(e) // {code: 1}

JSON.parse(JSON.stringify(new Uint8Array([1, 2, 3]))) // {'0': 1, '1': 2, '2': 3 }
rdfc(new Uint8Array([1, 2, 3])) // {'0': 1, '1': 2, '2': 3 }

JSON.parse(JSON.stringify({rx: /foo/})) // {rx: {}}
rdfc({rx: /foo/}) // {rx: {}}
```

Parameters

opts?

Options

Returns

< T >(obj): T

Type Parameters

T

T

Parameters

obj

T

Returns

T
